

Fact-find and plan, not fix. The output is an honest map of where marketing stands against what a listing requires, and a costed, sequenced roadmap to close the gap.

Day 1
Access

Days 2-3
The numbers

Day 4
Martech & AI

Day 5
Team

Days 6-7
Story

Day 8
Comms

Days 9-10
Roadmap

Access & data reality

DAY 1 · GATE

- Map the CRM and GTM data with RevOps: what exists, how clean, what marketing can see
- Is marketing's "CRM" the system of record, or a separate marketing database?
- Where pipeline and revenue actually live, and who administers them
- Verdict: can marketing reach trustworthy data. If not, that **is** the headline finding

The numbers today

DAYS 2-3

- Get the current reporting; work out what is actually real
- Can anyone produce a CAC that reconciles to finance? Any attribution at all?
- Marketing's honest contribution to revenue
- Trace real closed deals backwards: how much history is reconstructable
- Finance: which marketing numbers they would sign, and which they would not

Martech & AI estate

DAY 4

- Inventory every marketing tool: purpose, owner, cost, integrations
- Duplication, shadow tools, anything no longer used
- AI sprawl and governance: which tools, used how, with what controls
- Marketing data: lawful basis, consent, GDPR

Dependencies & politics

THROUGHOUT

- Who owns each blocker, and where the turf lines are
- Who is an ally and who is a threat

Team & capability

DAY 5

- Who actually does what, by behaviour not job title
- Whether a marketing ops / measurement layer exists at all
- Key-person risk, and knowledge living in one head
- Size the gap: what to build, hire, or bring in

Story & public surface

DAYS 6-7

- One story or five? Website, sales deck and investor materials compared
- Pressure-test the equity story against what the data can actually back
- Audit public claims for the unsupportable ones: verification landmines
- Customer evidence, logos, references, and whether permissions exist

Comms & control

DAY 8

- Meet the comms function: who signs off, who speaks
- How marketing and comms do, or do not, join up
- Distance to listing-grade control: section 21, quiet period, MAR

- What needs a leadership mandate versus marketing just getting on with it
- Write the pack as you go, not from memory at the end

What the ten days delivers

- **Findings pack:** honest current state, in plain language, with the reds and clock-running items flagged
- **Gap analysis:** where they are versus what a listing actually requires of marketing
- **Costed, sequenced roadmap:** what to do, in what order, what needs leadership, what needs hiring, what can start now

Scope, on purpose

- **In:** marketing's provable growth engine, the story, controls, and data
- **Not in:** profitability, the funding model, RevOps systems, the comms team, wider business risk

The clock is the only thing money can't buy back. With a multi-month B2B sales cycle and a listing window a couple of years out, the tracking this diagnostic scopes has to start capturing early, or the data won't have enough clean history to be credible at listing.

Runs alongside the company's sponsor and lawyers. Not legal advice.
